

The CIMS WMS offers innovative companies the most powerful and affordable WMS (warehouse management system) on the market today. Our products include all the major functionality offered by the big time “players” in the WMS marketplace, but at a fraction of the cost! All developed with advanced technologies and offered either on a cloud-based SaaS platform or on a conventional site licensing basis. Additionally, the CIMS WMS solutions also provide advanced e-Commerce capabilities necessary to fully support consumer direct business without the client having to go to a third party for e-Commerce support.

CIMS WMS Technical Features:

- Developed with Microsoft .Net Compact Framework
- Cloud or Local Area Network Platform
- Android Device Compatible
- Secured Wireless Communication
- Configurable Authorization Levels
- Simple, Intuitive, Easy to Navigate User Interface
- Modeled to Integrate with any ERP or Process Control System

CIMS WMS Tablet-Based Functionality:

- | | |
|------------------------|------------------------------|
| Receiving | Pallet/Cart/Piece Picking |
| Material Handling | Scan Packing |
| Putaway | FedEx, UPS and USPS Shipping |
| Cycle Counting | BoL Loading and Shipping |
| Picklane Replenishment | Order/Inventory Inquiries |
| Order Waving/Batching | Operational Dashboards |

Our technical team has the credentials and experience second to none in our industry. These professionals have successfully implemented SCE systems at some of the most prestigious companies in North America, systems whose longevity is measured in decades, rather than years, of successful operations!

The CIMS WMS applies and leverages this knowledge and experience to provide clients with affordable world class solutions that result in significant cost savings while improving client customer satisfaction and supply chain visibility.

The CIMS WMS provides for the control of a multi-channel distribution environment in the same operation and systems environment through controls of orders, inventories, and operational requirements. The CIMS WMS provides for controls to uniquely handle different customer demands in a multi-channel distribution environment, as follows:

Wholesale

The CIMS WMS provides for the processing of orders for both direct shipments to the customer's stores or shipments to the customer's DC for major retailers.

- VAS (e.g., ticketing, size tagging, hanging, bulk pull & pack)
- Pre-pack and assortment tracking – master and component SKU tracking
- Customer compliant shipping documentation:
 - UCC compliant shipping label
 - Case contents label
 - VICS BOL

Retail

The CIMS WMS has processing features to ship client-owned retail store orders. The system provides for multiple methods to comply with client store demands:

- Bulk pull and store put fulfillment
- Pre-cube and pick to shipping container
- VAS (e.g., ticketing, size tagging, hanging, bulk pull & pack, etc.)
- Cross docking of orders
- Plan-a-gram / store zone picking
- Wave planning by process type

e-Commerce

The CIMS WMS provides for the efficient and rapid processing of orders, especially small orders.

- Multi-line and single-line order fulfillment methods
- Routing and rating of shipment methods
- Drop ship functionality
- Integration into shopping cart software
- Integration into Amazon, Groupon, etc.

3PL Operations

The CIMS WMS provides functionality for 3PL environments, including but not limited to:

- Maintenance of separate client-owned inventories, separate client orders, etc.
- Multiple operational methods – basic combo of paper/RF to fully automated
- Exporting of data for billing purposes
- Multiple integration methods to set up new clients quickly
